Grapho-phonological parsing of C15 Scots

A reassessment of the [v]~[f] alternation

**Benjamin Molineaux, Rhona Alcorn,
Joanna Kopaczyk & Warren Maguire**

of EDINBURGH

The FITS Project (*From Inglis To Scots*)

- 4-year project at the Angus McIntosh Centre for Historical Linguistics
- Researching the early sound/spelling history of Scots
- Data: A Linguistic Atlas of Older Scots (LAOS, Williamson, 2008)
 - c.1250 Scots 'local documents' (c. 400k wds) dated 1380-1500
- Restricted to Germanic root morphemes
- Main RQ: What phonological facts underly the diversity of spelling in Scots (1380-1500) and how did it develop?

The team: Bettelou Los, Vasilis Karaiskos, Joanna Kopaczyk, Warren Maguire, Daisy Smith (and us two!)

The FITS Project (*From Inglis To Scots*)

Grapho-phonological parsing

- Resolves word forms into units of spelling, e.g.
 - <fisch> 'fish' <f> | <i> | <sch>
 - <houß> 'house' <h> | <ou> | <ß>

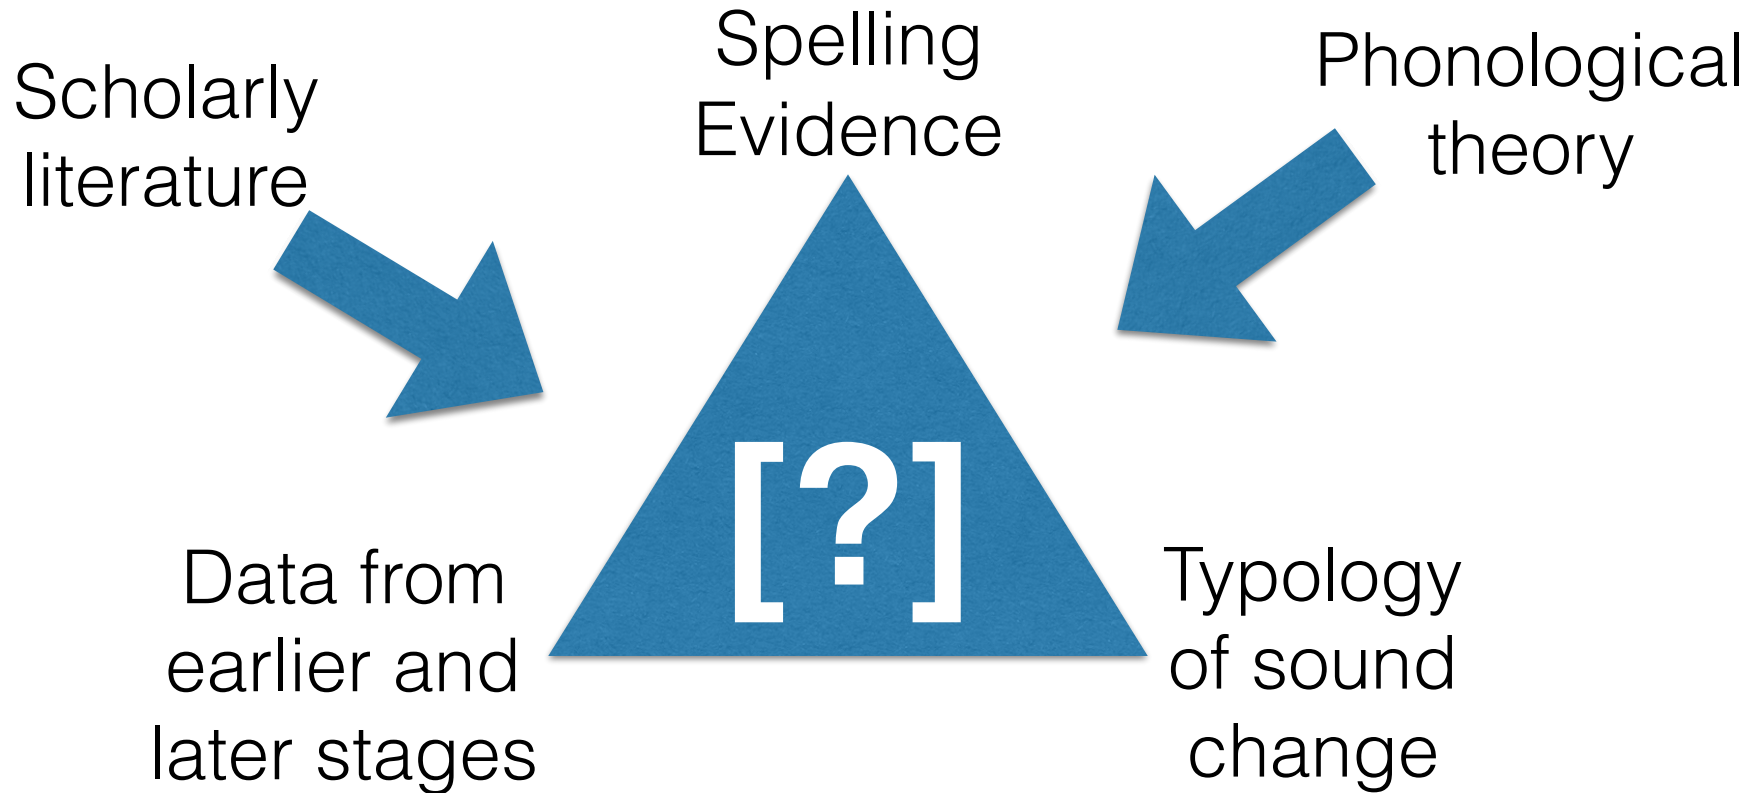

Grapho-phonological parsing

- Resolves word forms into units of spelling, e.g.
 - <fisch> ‘fish’ <f> | <i> | <sch>
 - <houß> ‘house’ <h> | <ou> | <ß>
- Annotates each token of each spelling unit with:
 - Etymological category, e.g. OSc <sch> < OE [ʃ]
 - Linguistic context:
 - position in word & neighbouring units: phonotactics, graphotactics & morphotactics
 - word class
 - Extra-linguistic context:
 - date, genre & place of origin of source ms.
 - Reconstructed sound value

How do we reconstruct OSc sound values?

Triangulate:

Using the FITS database: examples

- Synchronic 15C Scots
 - Interpretations of <ou>
 - Spellings of [ʃ]
- Diachronic (regressive)
 - Sources of 15C Scots [u:]
- Diachronic (progressive)
 - Reflexes of OE /f/
- For *any* unit of sound or spelling
 - Contexts in which attested (linguistic & extra-linguistic)

Final Devoicing (FD) in Mediaeval Scots

- Post-Old English apocope led to eME and Pre-Scots having /v/ in word-final position.
- In northern dialects of eME, FD is claimed for fricatives (Mossé 1952: §45, Fisiak 1968: 61)
- Johnston (1997:104) claims that FD is an early “diagnostic of Scots as a whole” and that “even in fourteenth century... final /v/ is almost always represented by <f>”

<f>-type spellings

<v>-type spellings

Word-final context (NEW, i.e. *luf-/gif-type*)

- Etymologically [v]

<f>-type spellings

- for [f] via FD

<v>-type spellings

- for [f] with 'residual' spelling
- or for [v] in cases without FD due to incomplete apocope

<f>-type spellings

<v>-type spellings

Word-final context (ORIGINAL i.e. *lif*-type)

- Etymologically [f]
- <f>-type spellings
- for [f], as expected
- <v>-type spellings
- for [f] as back-spellings based on *luf*-type
 - for [v] by levelling with inflected forms (*liv*<*livis*)

■ <f>-type spellings

■ <v>-type spellings

Pre-inflectional context (*lif*-type)

- Etymologically [v]

<v>-type spellings

- for [v] as expected

<f>-type spellings

- [f] spreads from word- to stem-level – via structural analogy (*liffis*<*lif*)

<f>-type spellings

<v>-type spellings

Pre-inflectional context (*luf-/gif-type*)

- Etymologically [v]

<v>-type spellings

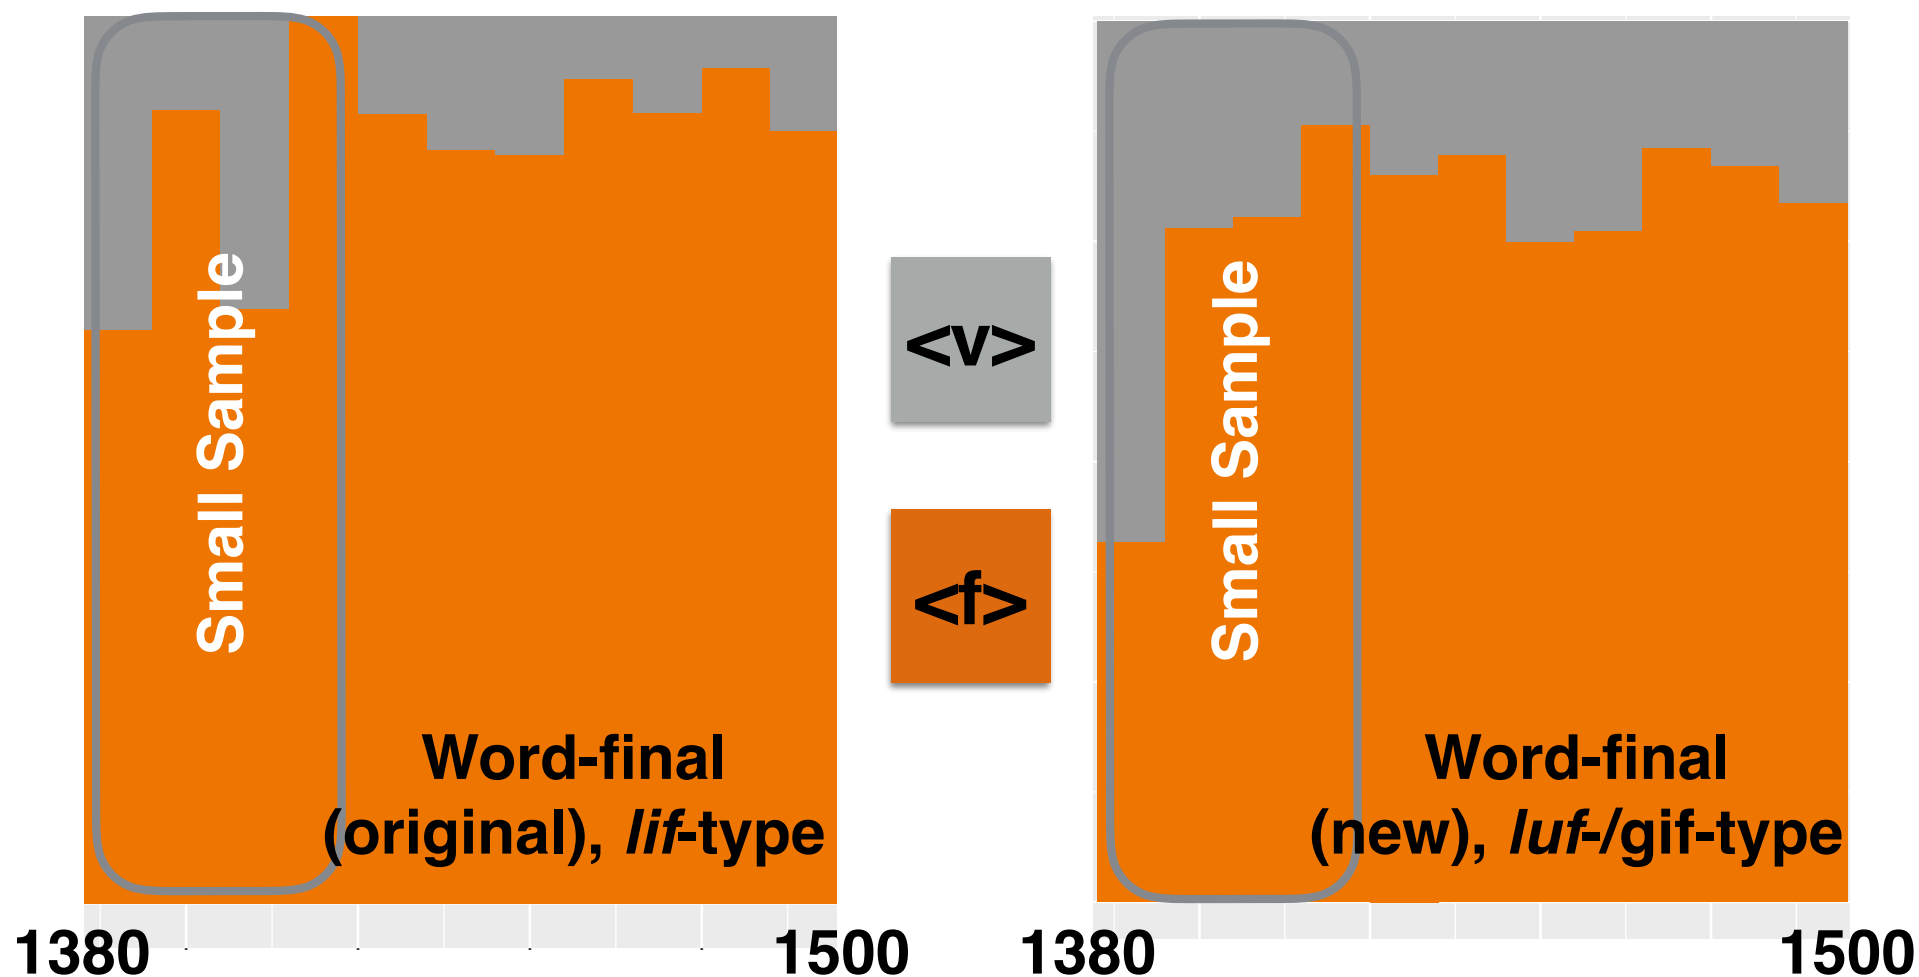

- for [v] as expected

<f>-type spellings

- Final devoiced [f] (**still in variation with [v]**) spreads from word- to stem-level – via structural analogy

The diachrony of Final Devoicing (FD)

The proportion of <v> vs. <f> type spellings remains stable

The diachrony of Final Devoicing (FD)

Within the LAOS period:

- <v> is on the rise, pre-inflectionally
- Partial analogical spread of [f] to stem-final position is waning
- The pan-Anglic trend to have pre-inflectional voiced fricatives is (re)instated
- This requires lexical diffusion advancing and then retreating, but aligns with present day data

The diachrony of Final Devoicing (FD)

FD enters the Phonology of Pre-Scots

FD begins as phonetic and gradient, fed by apocope

- **[v]~[v̥] word-finally**

It eventually effects a change in phonological category

- **/v/ > /f/ word-finally**

/f/, however, probably remained in variation with /v/, as a result of FD applying before apocope was complete

- **/v/ ~ /f/ word-finally**

The diachrony of Final Devoicing (FD)

/f/ spreads to the stem-level in Pre-Scots

By structural analogy, [f] in uninflected forms levels to inflected ones, spreading gradually across the lexicon

- **[v]>[f] stem-finally**

Structural analogy and lexical diffusion are both non-categorical, so the change is not complete

- **[v]~[f] stem-finally**

Greater proportion of <v> in luf/gif-type (as opposed to lif-type) stems from [f]~[v] alternation in the uninflected forms

The diachrony of Final Devoicing (FD)

Pre-inflectional [f] is replaced by [v] once again

During the 15c pre-inflectional /f/ is again replaced by /v/ for the luf/gif-type words

- **[f] > [v] pre-inflectionally (luf-/gif-type words)**

This happens in a general region where pre-inflectional fricatives are voiced (pan-Anglic pressure)

Based on the present day data, *lif*-type words must have changed back from [f] to [v] pre-inflectionally, as did the *luf*-/*gif*-type, word-finally.

- **[f] > [v] pre-inflectionally (lif-type words)**
- **[f] > [v] word-finally (luf-/gif-type words)**

Assessing the Final Devoicing account

Pros:

- Is consistent in following a transparent spelling/sound mapping for all positions of the fricatives
- Follows well attested phonological patterns in the spread of changes (FD, analogy, diffusion)

Cons:

- Proposes a change that does not come to completion and actually retracts (after spreading)
- There are no unambiguous reflexes of FD in present-day Scots.

Should we accept Final Devoicing in early Scots?

- Primary evidence is the preponderance of final <f> spellings for words with etymological [v] (e.g. *luf*, *gif*)
- Is there another explanation?

luf/gif-type

The alternative to Final Devoicing

- A spelling-only change? I.e. Did <f> come to be used for [v] word-finally and pre-inflectionally?

The alternative to Final Devoicing

- A spelling-only change? I.e. Did <f> come to be used for [v] word-finally and pre-inflectionally?
- Problems:
 - <f> usually represents [f], e.g. *fisch*, *offer*, *lif*, etc
 - [v] is spelled <v> elsewhere, e.g. *vicar*, *sevin*, etc
 - would mean OSc spellings are unreliable

OE /f/ in Older Scots: conclusions

Case study:

- Shows how we identify and handle problems in our segmental histories
- Demonstrates the value of quantitative and qualitative data in the FITS database
- Illustrates how we can use FITS data to test and refine what others have claimed

FITS database:

- Supports claims of final devoicing of /v/ in pre- Scots
- Offers new insights:
 - FITS data suggests devoicing: was variable; spread into new domains; had begun to recede in C15

(Refs on request)

Hybrid version: FD **and** spelling change

- Final <f> via FD; pre-inflectional <f> via levelling from word-final <f>
- Treats final <f> as the outcome of FD
 - *Problem*: no unambiguous PD reflexes
- Treats pre-infl. <f> as a spelling development: incipient standardisation?
 - *Problem*: diachronic trend is a reversal of pre-inflectional <f> in 15C
 - *Problem*: undermines our confidence in the phonetic faithfulness of OSc spellings
